4th Workshop on Propagation Channel Models and Evaluation Methodologies for 6G

WORKSHOP General Chair

Peiyang Zhu, Huawei Technologies, Canada

WORKSHOP Co-Chair

Jian Li, Huawei Technologies, China

Roberto Verdone, University of Bologna, Italy

TPC Co-Chair

Narcis Cardona, UPV, Spain

Jianhua Zhang, BUPT, China

Mate Boban, Huawei Technologies, Germany

TPC MEMBERS

Chen Huang, Purple Mountain Laboratories, China

Chong Han, Shanghai Jiao Tong University, China

Jie Huang, Southeast University, China

José Rodríguez-Piñeiro, Tongji University, China

Ke Guan, Beijing Jiao Tong University, China

Pan Tang, BUPT, China.

Peize Zhang, University of Oulu, Finland

Ramez Askar, Fraunhofer HHI, Germany

Roy Sun, CableLabs, USA

Shu Sun, Shanghai Jiao Tong University, China

Taro Eichler, ROHDE & SCHWARZ, Germany

Thomas Zemen, Austrian Institute of Technology, Austria

Tommi Jamsa, Huawei Technologies, Germany

Vittorio Degli-Esposti, University of Bologna, Italy

Wenfei Yang, Huawei Technologies, China

Xi Liao, CQUPT, China

Xuesong Cai, Peking University, China

Ziming Yu, Huawei Technologies, China

SCOPE

Building on the success of past three editions, the 4th workshop on Propagation Channel Models and Evaluation Methodologies for 6G keeps investigating the up-to-date research on i) wireless propagation channel measurement and modeling and ii) the evaluation methodology required for future 6G application scenarios. First, the workshop will focus on channel measurements and modeling for new application scenarios and new spectrums, addressing the requirements of evaluating key 6G candidate technologies. Moreover, as the artificial intelligence (AI) is foreseen widely adopted in future wireless communication systems, it will also delve into AI-driven approaches in channel modeling. Second, it will further discuss the evaluation methodologies based on novel channel models for the upcoming standardization activities in ITU, 3GPP, etc. The workshop anticipates perspectives from both academia and industry.

TOPICS OF INTEREST (including, but not limited to)

- Novel channel sounder designs and measurement methodologies to support measurement campaigns for 6G application scenarios.
- Novel channel modeling methodologies for 6G.
- Measurement and channel modeling in frequency band including low-band, mid-band, mmWave, sub-THz, and THz.
- Measurement and modeling of advanced antenna technologies.
- Measurement and channel modeling for integrated sensing and communication.
- Measurement and channel modeling for connected industries and automation.
- Measurement and channel modeling for non-terrestrial networks.
- Measurement and channel modeling for connected automated driving.
- AI-driven approaches in channel modeling.
- Novel evaluation methodologies for 6G.
- New techniques to generate and analyze radio channels.
- Evaluation methodologies for antenna configurations and antenna patterns.
- Novel evaluation methodologies for network deployment.
- Results of simulations and performance testing

IMPORTANT DATES

Paper Submission Deadline:

Paper Acceptance Notification:

Camera Ready:

~~15 July~~ **07 Aug. 2025**

1 September 2025

1 October 2025

SUBMISSIONS
